Capturx™ Mobile: BlackBerry®

Capturx Mobile Software Speeds Data Collection with Bluetooth-Enabled Digital Pens and Mobile Phones

Using Capturx applications and digital pens, teams digitally capture handwritten markups, form-based data, map notations, and notes. Once the digital pens are docked to a computer with Capturx installed, the data is automatically integrated into SharePoint®, Microsoft® Office, ESRI® ArcGIS or PDF files.

With Capturx Mobile installed on a BlackBerry, a remote worker can use Bluetooth technology to transfer handwritten data from the digital pen to a BlackBerry. After that, it's easy to email the digital ink to the office or upload it to a SharePoint server.

Central teams can now get immediate access to field data without requiring workers to travel with mobile computers, applications, or source files. Mobile workers simply collect data on paper printouts and notebooks, and then Capturx instantly sends and automatically integrates handwritten data into Microsoft Office, SharePoint, ESRI ArcGIS, and PDF files.

Capturx Mobile gives workers the power to send data from the field, armed with only a digital pen, paper printouts, and a BlackBerry. Back in the office, managers will have instant access to time cards, inspection reports, as-builts, maps, sales orders, delivery receipts...any data that is being collected by mobile workers.

Capturx Mobile: How It Works
Capturx Mobile supports the entire Capturx product line and is an add-on to Capturx Forms for Excel, Capturx for OneNote, Capturx for ArcGIS, Capturx for SharePoint, and Capturx Markup for PDF software. Handwritten data can be sent from mobile devices through email or directly uploaded into a SharePoint Server. In both scenarios, teams simply pair their Blackberry device with the Capturx digital pen. Data sent through email is instantly integrated into Microsoft Office, ESRI ArcGIS, or PDF files once the recipient opens the email message and attached file.

Capturx Mobile automatically aggregates data from multiple field workers into central servers for immediate data access, workflow, and archiving.

A broad range of individuals and teams in the field rely on Capturx to speed information capture and sharing:

- Field Service Teams
- Engineers
- First responders
- Contractors

- Mobile office workers
- Surveyors
- Truck Drivers
- Public safety

- Inspectors
- GIS teams
- Builders
- Military

And more...

Central teams get immediate access to field data without requiring workers to travel with mobile computers, applications, or source files.

"With the new Capturx Mobile capabilities, we can instantly collect and share immediate updates from any type of emergency situation which makes it safer for everyone."

Mobile for BlackBerry®

Capturx Mobile for Remote Teams

"Capturx Mobile for Blackberry is the perfect companion for Capturx for ArcGIS. Capturx Mobile enables our first responders to collect critical information in the field and send it to decision makers in the Emergency Coordination Center (ECC) within seconds."

ERIC DRENCKPOHL
Enterprise GIS Manager

Capturx Mobile
Capturx software for mobile devices enables the Capturx digital pen to connect to wireless devices using Bluetooth. Capturx Mobile software can be configured to send Capturx data from mobile devices to remote users by email or directly to servers through secure internet connections.

Capturx Digital Pen
The Capturx digital pen writes with regular ink, digitizes and stores the handwriting using a built-in sensor and local memory. The pen recharges through USB and can be used for up to 10 days with a single charge. Data can be sent via Bluetooth and a mobile phone, or via USB connection to a PC with Capturx Pen Manager installed.

Key Features

Automatically send handwritten data to others using Bluetooth enabled mobile phones and email.

Instantly integrate handwritten data into Microsoft Office, SharePoint, ArcGIS, or PDF files.

Print and write on plain paper with Capturx products. When finished check a box on the printed document with the digital pen and the handwritten data is instantly sent to others.

Access data in SharePoint sent instantly via Bluetooth. The Capturx digital pen can immediately send field data to SharePoint through mobile devices using built-in Bluetooth support.

Date, time, and author stamps for each entry. Validate data capture by seeing when handwritten data occurred.

Data is automatically associated with the correct file by double clicking on the email attachment.

System Requirements

Compatible BlackBerry device* with version 4.3 or greater (4.5+ recommended) of the BlackBerry (RIM) OS and an active email account

Due to different hardware and software options, some Blackberry devices are not supported. Please contact sales for more information.
